

## FUTURE STRATEGIC TANKER AIRCRAFT

### Did you know...? Strange, but true!

Each Airbus A330-200 aircraft in the FSTA fleet will customarily carry a minimum of 80 tonnes (100,000 litres) of aviation fuel.

### 80 tonnes per aircraft approximates to:

44 hippopotamuses  
(average 1,650 kg each)

444 Sumo wrestlers  
(average 180 kg each)

16 African male elephants  
(5 tonnes each)

### 100,000 litres equates to:

2,500 Mini Cooper petrol  
tanks  
(at 40 litres each)

400,000 cups of tea  
(at 250 ml each)  
In Britain we drink 165  
million cups a day, so we'd  
slurp through 400,000 cups  
in 35 minutes

370 average bath tubs  
(at 270 litres each)

### FSTA dispenses fuel at approx 5,000 litres per minute or 80 litres per second

A Mini Cooper would be filled by FSTA in less than two seconds.  
Using all three refuelling points, you could fill 125 Mini Coopers per minute –  
that's more than two per second!
